PROFESSIONAL SUMMARY

Driven Computer Science graduate with hands-on experience in enterprise Data Center operations, Network Operations Center (NOC) environments, and high-performance compute clusters. Proven ability to configure VLANs, manage IP address allocation, and troubleshoot complex network and hardware failures under tight SLAs. Combines hardware infrastructure expertise with programming skills to implement automation and optimize network reliability.

EXPERIENCE

Data Center Deployment Network Engineer @ Tensorwave **December 2025 – Present / Remote**

- Optimize network performance and uptime for GPU infrastructure dedicated to AI workloads using Arista switches & EOS CLI.
- Oversee and assist with the installation of Layer 1-3 network infrastructure throughout initial data center build phases.
- Audit fiber/copper terminations, test light levels (OTDR), and verify network health before production handoff.

Data Center Technician @ Tensorwave **December 2024 – December 2025 / Miami, FL**

- Installed, configured, and maintained high-performance compute nodes optimized for AI workloads, including systems powered by AMD Instinct accelerators.
- Provisioned and managed VLAN configurations, subnet allocations, and IPAM across high-availability data center environments using CLI and network automation tools.

Network Operation Center Technician @ 365 Datacenter **July 2024 – December 2024 / Boca Raton, FL**

- Deployed and commissioned enterprise routing/switching hardware, server racks, and high-speed fiber-optic (SMF/MMF) and copper patch connections.
- Monitored network health and infrastructure alerts within the NOC, serving as the first line of defense to resolve critical facility anomalies and prevent packet loss.

Junior Software Engineer @ BetterNOI **April 2023 – March 2024 / Miramar, FL**

- Developed solutions based on product initiatives and business challenges using Python and JavaScript.
- Designed and created efficient RESTful endpoints; managed MySQL, MongoDB, Hadoop, Solr, and Elasticsearch data sources.
- Utilized GitLab for version control and Sentry for application monitoring throughout the Software Development Life Cycle.

Data Center Technician @ Flexential **December 2022 – April 2023 / Ft. Lauderdale, FL**

- Provided IT support and ticket management via ServiceNow to staff and enterprise customers.
- Maintained and monitored facility support systems such as UPSs, HVAC, Fire detection/Suppression, Security and CCTV.
- Diagnosed and resolved complex layer 1 and layer 2 network faults, systematically testing copper and fiber uplinks to maintain maximum backbone connectivity.
- Installed copper and fiber optics throughout the data center, when necessary, along with testing and troubleshooting.

PROJECTS

Home-Lab: Personal Project **August 2024 – Present**

- Developed a Home-Lab server utilizing an HP ProDesk installed with Proxmox OS running multiple systems such as virtual machines and Linux containers.
- Architected and secured a local network architecture featuring custom DNS resolution, reverse proxies (NGINX), split-tunnel VPN access, and localized storage (NAS).

Carlos C Dev: Personal Project / www.carloscdev.com **February 2024 – March 2024**

- Developed a React-based personal portfolio website to portray skills and experience using complex UI components.

EDUCATION / CERTIFICATION

Bachelor of Science in Computer Science: Florida Atlantic University / Boca Raton, FL / 2022 / **GPA 3.8**

Data Science Certificate: Florida Atlantic University / 2022

SKILLS

Technical Skills: Arista Hardware (EOS), VLAN Configuration, IPAM/Subnetting, Fiber/Copper Topology, Proxmox, Docker, VMs, LXC, Linux, AWS, NGINX, Cloudflare, Python, Ansible, JavaScript, SQL, Git/GitHub, Jira, Confluence, ServiceNow, GitLab

Languages: English (Native), Spanish (Fluent)
